

**Overview**

**Silverstar**

Most suitable for firmer back support.  
 Recommended for serious adverse back conditions.

**Vitaflex**

More flexible for overall body support.  
 Recommended for normal body condition.

**AustroFlex**

Most customizable system.  
 Ideal for normal and adverse body condition.  
 Special motorized head/shoulder adjustable section for neck/shoulder pain.

**Features**

**Silverstar**

Sophisticated strong, multi-layer laminated beech slats.  
  
 Unique rubberized supports for every two slats to create a wave-like body contouring suspension system.  
  
 The rubberized supports are at the ends of each slat, so the system flexes less at the ends and somewhat more along each wooden slat for an overall firm and comfortable system.

**Vitaflex**

More than 60 pods are fused to wooden slats.  
  
 Each pod is made of high tensile strength DuPont polymer, and has a structure which dynamically alters its support of the body depending on sleep position, body shape, and weight.  
  
 The pod and wooden slat combination provides a unique, universal suspension for back and side sleepers.  
  
 The orange pods at the shoulder area are slightly more giving than the grey pods, which offer firmer support for the rest of the body.

**AustroFlex**

More than 60 pods are arrayed and fused to wooden slats.  
  
 Each slat is anchored at both ends with moveable joints.  
  
 Each pod is designed to gently support the most minute changes in body position. This provides the least possible stress to the spinal cord by aligning it in as natural a position as possible. No matter how you rest, the pods and slats dynamically flex for continuous ergonomic support.  
  
 Each pod can be made firmer by inserting a tension clip so one can make sections of the body firmer (shoulder, hip, side of back). These locations can be changed as your body condition changes.

**Electrically Adjustable Systems**

Our electrically adjustable suspension systems can be matched to any of our mattresses. All our mattresses will fold to the ergonomic contours of our adjustable suspensions as the neck, back, leg and knee sections are raised. Our Queen and King size electrically adjustable systems consist of two independent halves. Each half has its own motors and separate controls for greater performance and durability. Because each side has either two or three motors, Queen and King size bed systems have either four or six motors. Twin and Full size bed systems have either two or three motors.

	Number of Motors <small>twin-full/queen-king</small>	Neck/Shoulder Adjustment	Back Adjustment	Upper Leg Adjustment	Lower Leg Adjustment	Wired Remote Control	Wireless Remote Control
<b>ELECTRICALLY ADJUSTABLE</b>							
<b>Silverstar EL</b>	2/4	85° * * manual adjustment	55°	55°	- 5°	standard	optional upgrade
<b>Vitaflex EL</b>	2/4	60° * * automatically rises as back section is raised	45°	45°	- 5°	standard	optional upgrade
<b>AustroFlex EL</b>	3/6	90° * * dedicated motor, independently adjustable	75°	50°	- 10°	standard	optional upgrade
<b>MANUALLY ADJUSTABLE</b>
